

## **Fullstack Javascript Developer - Logistics (m/f)**

“Our team is responsible for providing restaurants with delivery service. Areas like HR, disposition and delivery depend on us to develop and maintain their web and mobile applications. We have no dependencies, we are free to make our own technical decisions and get to work with the latest, cutting edge technologies.”

### **Your job**

- Collaborating with your team and stakeholders to improve our systems and their functionality (delivery, jobs scheduling, shiftplanning, etc.).
- Solving complex engineering problems to enhance our service and the overall customer experience.
- Refine and grow your expertise in topics such as Javascript, React and NodeJs.
- Promote and contribute to good software engineering practices across the team and all of IT.

### **Your profile**

- You are a real team player who is comfortable with practices such as pair programming, code reviewing and knowledge sharing.
- You can work in Frontend with JavaScript (ES6), React and Redux.
- You can work in Backend with NodeJS and ExpressJS.
- You understand how to effectively build and architect for the cloud.
- You are passionate about clean code.
- Fluent in English (written and spoken).

### **Our offer**

- The opportunity to work on interesting projects, applying best practices, and increasing your knowledge using different designs and architectures (e.g Event Driven Architecture, Reactive programming)
- Being part of a unique, professional, and culturally diverse team who loves to learn and share knowledge
- Workshops, conferences, and training seminars to support our growing team
- Custom workstations/laptops (Mac/Linux/PC) so you can get the job done
- Free drinks, fruit, several sports benefits, and awesome team events
